PROPSHAFTS

Premium quality, excellent range and availability

Shaftec has been supplying remanufactured and new parts to the motor trade for over 20 years. The business is now firmly established as a leading supplier of aftermarket transmission, steering and braking parts.

And now, we've incorporated our experience and knowledge into a surcharge-free, matched OE quality range of new propshafts for the European aftermarket.

With many more references already in development, the initial range of 170 parts offers exceptional car parc coverage and is backed by the highest levels of availability & customer service, marketing & technical support - with next day delivery available.

Wide car parc coverage across classes

Available for a wide range of Rear Wheel Drive (RWD), All Wheel Drive (AWD), Four Wheel Drive (4WD), passenger cars and light commercial vehicles across most vehicle manufacturers, the programme consists of one-, two- & three-piece shafts, and all parts are accompanied by a two year or 24,000 Mile warranty, as standard.

Manufactured with precision – tested to the extreme

With over 25 years of experience in the field of driveshafts and CV Joints, it's safe to say, we've learned a thing or two; and this range of new propshafts perfectly complements Shaftec's existing product portfolio.

A propeller shaft – or propshaft is the shaft that connects the gearbox to a rear differential, and you can have up to three on a vehicle. The handling of each propshaft is designed according to the class of vehicle it will be fitted to. In accordance with this, Shaftec's programme caters for all vehicle sizes, from the largest to the smallest.

As with all its safety critical parts, Shaftec goes above and beyond to ensure material quality and strength, and all are tested to the extreme in line with strict industry guidelines.

And all propshafts are:

- Engineered for low Noise Vibration Harshness (NVH)
- 100% balanced
- Inspected for Radial run-out

Full Data & Cataloguing Support

At Shaftec, we know that our customers, the distributors, and in turn their customers, the independent garages, are busy people. And they all want the job done right, first time. With that in mind we always go the extra mile, not only to ensure maximum availability, but also easy and fast identification. That's why we choose to offer a full range of data and cataloguing support, not simply from a single source. All application details for Shaftec products can be found on:

- Shaftec ECAT online catalogue
- TecDoc
- MAM

One Facility. Six Months Stock. Always.

As part of a multi-million-pound expansion programme in 2015, the business relocated its Headquarters in Birmingham to new 42,000sq ft premises – where its remanufacturing facilities and warehouse are now incorporated, under one roof on one site. This allows the business full process control and the ability to keep a minimum of six-month's worth of stock on its shelves; meaning Shaftec can always deliver the parts its customers need, when they need it.

170

The new range launched has almost **170 part numbers**, many more are in development

24

All propshafts are covered by a **24 Month, 24,000 Mile** warranty
